

Workshop on energy saving and energy labelling

Country	Lithuania	 
School/building, where good practice was implemented	All 50/50 schools from Lithuania	
Area of intervention	Energy awareness raising	
Type of intervention	Change of behavior	
More information	KREA (info@krea.lt)	

Short description of the action with the main steps taken:

The workshop on energy savings and energy labelling was organized at the beginning of the project. Specific topics included: heat and electricity consumption in buildings, possible energy-saving measures, behavioural measures, energy labelling, energy efficient devices, lighting, green public procurement and many others.

The aim of the workshop was to:

- refresh and increase caretakers' knowledge on various energy issues,
- present the newest technologies in lighting and heating,
- encourage caretakers to buy energy efficient equipment and teach them how to recognize it (energy labelling),
- inform how energy savings calculation will be done within the project.

Short overview of the material/tools used:

During the workshop involved specialists presented their PPT presentation on various topics. After each presentation a discussion was held.

Short overview of people involved:

Workshop was addressed to different representatives of the 50/50 schools: school principals, caretakers, teachers and others.

Main results achieved:

School principals, caretakers, teachers and others learned many new things about saving energy and were provided with plenty of information useful for project implementation.

Why is it best practice? Why is it worth replicating in other schools/ buildings?

It as a best practice because all schools' representatives were trained at once. Giving necessary knowledge is the only way to empower schools to save energy.
